Art Unit: 3611

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 23 and 27 are finally rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The "tie" lacks antecedent basis. This should apparently be -- tie rod --.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 24, 25 and 27 are finally rejected under 35 U.S.C. 103(a) as being unpatentable over Kludszuweit (DE 44 04 831) in view of Warrick.

In fig. 7, Kludszuweit discloses a drive system having the structure substantially as claimed. The system includes a manually-operable member 1.1, a first lever 2, a second lever 1, a tie rod 3, and a hydraulic pump 4. Although it is likely that Kludszuweit includes a hydraulic motor, this is not clear from the German reference. However, Warrick teaches a similar system including hydraulic motors 31, 32. It would have been obvious to modify Kludszuweit by including a hydraulic motor, as taught by Warrick, to provide an efficient means to drive the rear wheel. It is considered to be inherent that a hydraulic motor provides a mechanical advantage. This mechanical advantage constitutes a "gearing effect" as broadly claimed.

Regarding claim 25, Warrick teaches the use of a variable capacity pump, instead of a variable capacity motor. However, Official Notice is taken that the use either a variable capacity

Art Unit: 3611

pump, or a variable capacity motor, is well known to achieve variable output. It would have been an obvious rearrangement of parts to modify Warrick by using a variable capacity motor rather than a variable capacity pump.

5. Claim 23 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. Claims 1-7 and 18-22 are allowed.

7. Claim 26 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 3611

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
